## **BRAINSTORMING**

- A beautiful interface will be created with UX Research in mind to give users the best possible User Interface and Experience.
- 2. The user will enter the marks of their Grade 12 board exam
- 3. This mark will be forwarded to the backend
- The algorithm for this particular program will take the inputs and process it

- The algorithm will fetch the data from the predefined CSV file which contains the list of Universities
- Now this data will be processed by using Applied Data Science method
- This ADS method will also train the data by using a specified model for better predictions
- 8. Now the data that is fetched by the Algorithm is now transmitted from Backend to Frontend User Interface
